Assessment of tricuspid flow

Dear Wolfgang Moroder,

Thank you for submitting your logbook of 3 images. I examined each image for the following criteria: magnification (fetal thorax), apical four chamber view, sample volume size and position, insonation angle $< 30^\circ$, high sweep-speed (3-6 waveforms), and your assessment (see table below).

Criteria	Image number		
	1	2	3
Magnification	✓	✓	✓
Apical four chamber view	✓	✓	✓
Sample volume size and position	✓	✓	✓
Insonation angle	✓	✓	✓
High sweep-speed (3-6 waveforms)	✓	✓	✓
User's assessment	✓	✓	✓

Legend: ✓ = pass ✗ = fail -- = not possible to assess

Your images are satisfactory. Your software license will include the assessment of **tricuspid flow** in the risk calculation for chromosomal abnormalities and your name will appear on the list of sonographers certified for assessment of tricuspid flow.

Best wishes,

Olga Torres Khoury
